## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I.* Claims 1-114, 138-161 are drawn to access control to a storage unit and preventing unauthorized access, classified in class 713, subclass 193.
- II.* Claims 115-117 are drawn to using cryptographic functions to authenticate, classified in class 380 subclass 282.
- III.* Claims 118-137 are drawn to a unit that records a revocation list, classified in class 713 subclass 158.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention *I* has a separate utility in that access control to a storage unit to prevent unauthorized access is not needed with the other Groups *II-III*.

**Group I**, has utility of a methods/system in which access control to a storage unit is protected and prevented. **Group II's** utility is that methods/steps in which security is enhanced by using particular cryptographic functions. **Group III's** utility is wherein a single source provides information invalidating a previously issued certificate. See MPEP 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their classification, restriction for examination purposes as indicated is proper.

Art Unit: 2131

Applicant is advised that a reply to this requirement must include an election of the invention to be examined even though the requirement be transverse (37 CFR 1.143).
